

ENDUROTECH RACING / CAR SELECTION BRIEF

24 HOURS OF SPA WHICH CAR DO WE RUN?

Six cars, last three days of practice, available drivers only. Judged the way a 24-hour race is won: driver depth, repeatable pace and staying clean, not one hot lap.

THE PICK

**FERRARI
296 GT3**

The deepest fast roster (eight available drivers inside 2:19), the best one-lap pace of any well-sampled car, the cleanest of the multi-driver options and strong on fuel. The car the most of our line-up can drive fast and keep clean over 24 hours.

GT3 CARS COMPARED

CAR	FAST DRIVERS	CLEAN LAPS	BEST LAP	TOP-5 AVG	CLEAN %	FUEL/LAP
FERRARI 296 GT3	8	72	2:17.011	2:18.229	53%	3.97
PORSCHE 911 GT3 R	6	68	2:17.918	2:18.704	44%	3.99
MCLAREN 720S GT3	5	78	2:17.246	2:19.611	48%	4.17
FORD MUSTANG GT3	4	37	2:16.538	2:18.706	30%	4.21
BMW M4 GT3 EVO	1	15	2:17.534	2:18.190	65%	3.83

FERRARI 296 - THE PICK

Deepest fast roster (8), best sampled one-lap pace (2:17.0), cleanest multi-driver car (53%), good fuel. Lead car.

PORSCHE 911 GT3 R

Solid number two. Six quick drivers, near-identical pace and fuel. Only knock is a lower clean rate (44%). Ideal second-entry car.

FORD MUSTANG GT3

Fastest single lap of all (2:16.5) but just 30% clean and the thirstiest. A qualifying weapon, too risky for race stints.

BMW M4 - THE WILDCARD

Cleanest (65%) and most fuel-efficient (3.83 L), but only one available driver has run it. Get two or three more in it and it could challenge the Ferrari.

Read the numbers honestly. These are mixed practice and qualifying laps, so clean rate is a guide, not race behaviour. The Mustang and BMW lead single metrics, but only the Ferrari wins the combination that matters over 24 hours: many fast drivers, repeatable pace and good fuel. Run the Ferrari, keep the Porsche as the second car, and give the BMW a directed multi-driver test before we lock everything. Pace = each car's top-5 available-driver average clean lap (lower is faster); Acura NSX omitted as a one-driver non-contender.
